

Assessment Details

ID:	574983	Tasks Completed:	12
Gender:	Female	Completion Date:	03/19/2019
Date of Birth:	02/19/1967	Comparative Group:	Females, 35-44

Performance Summary

Monkey Ladder

A measure of visuospatial working memory—the ability to remember information about objects in space, and update memory based on changing circumstances.

ABOVE AVERAGE

125 | 95th Percentile

Result is in the ABOVE AVERAGE range. Common everyday activities associated with visuospatial working memory include:

- Following step-by-step instructions to carry out a task in a few different locations.
- Viewing a route on a map, then following the route from memory.
- Understanding positioning in sports, and carrying out pre-planned plays.
- Viewing a document, then carrying out the written instructions.

Double Trouble

A measure of response inhibition—the ability to concentrate on relevant information in order to make a correct response despite interference.

AVERAGE

101 | 57th Percentile

Result is within the AVERAGE range. Common everyday activities associated with response inhibition include:

- Keeping your eyes on the road when driving, despite passing distracting signs or people.
- Blocking out background conversations when you're on the phone.
- Inhibiting your emotional gut reaction to a social media post to formulate a more rational response.
- Ignoring attention-grabbing buzzwords on product packaging to focus on relevant information.

Feature Match

A measure of attention—the ability to focus on relevant details or differences.

AVERAGE

107 | 67th Percentile

Result is within the AVERAGE range. Common everyday activities associated with attention include:

- Staying focused on a task when it counts, such as when driving
- Identifying similarities and differences when comparing two things, such as two similar brands of a household product.
- Noticing small interpersonal details, like a partner's haircut, or subtle facial expressions indicating that somebody is upset or bored.

Monkey Ladder

A measure of visuospatial working memory—the ability to remember information about objects in space, and update memory based on changing circumstances.

Score increased by 43 compared to baseline result on 08/31/2019 (meaningful change) and increased by 5 compared to previous result on 11/04/2019.

ABOVE AVERAGE

125 | 95th Percentile

Double Trouble

A measure of response inhibition—the ability to concentrate on relevant information in order to make a correct response despite interference.

Score increased by 14 compared to baseline result on 08/31/2019 (meaningful change) and decreased by 10 compared to previous result on 11/04/2019.

AVERAGE

101 | 57th Percentile

Feature Match

A measure of attention—the ability to focus on relevant details or differences.

Score increased by 7 compared to baseline result on 08/31/2019 and did not change compared to previous result on 11/04/2019.

AVERAGE

107 | 67th Percentile
